bidiVisual Table Edge Case

The cell text stays left-to-right, but Word mirrors the physical grid: logical cell 1 is the narrow cell at the far right. Logical start borders render on the right and logical end borders on the left.

Logical 3 — LEFT	Logical 2 — CENTER	Logical 1 — RIGHT
C / widest logical column	B / medium column	A / narrow
Logical 3 — visual LEFT	Logical 1+2 merged — visual RIGHT	

The unequal widths and merged final row detect implementations that reverse cell arrays instead of mirroring logical grid coordinates. Green/red belong on the right; purple/orange belong on the left.
