Table Cell Preferred Widths

This table intentionally has an empty tblGrid. Word reconstructs the three columns from cell tcW preferences: narrow, wide, narrow (1:2:1).

NARROW 1	WIDE 2 — twice the width	NARROW 1
SPAN 1+2 — preferred width is 4320 DXA total		NARROW 1
	CENTER CELL — outer grid columns omitted	

Expected geometry: the center column is exactly twice either side; the merged second-row cell occupies the first three quarters, and the final row contains only a centered wide cell.

The next table has tblW=50%, only its first gridCol (72pt), and no cell tcW values. It must remain half-width instead of filling the page.
