Table Shared Border Conflicts

Word keeps the visible side of a shared cell edge when its neighbor specifies nil or none. A later-painted hidden edge must not erase it.

RED DOUBLE →	← NIL
NIL →	← BLUE DASHED
GREEN 4PT SINGLE →	← RED 1PT DOUBLE
BLUE 3PT SINGLE →	← PURPLE 1PT DOUBLE
RED 1PT SINGLE →	← BLUE 1PT SINGLE

Expected top to bottom: red double, blue dashed, green 4pt single (higher weight), purple 1pt double (equal-weight style winner), and red 1pt single (color brightness winner).

GREEN 4PT BOTTOM ↓	BLUE 3PT BOTTOM ↓
↑ RED 1PT DOUBLE TOP	↑ PURPLE 1PT DOUBLE TOP

Expected horizontal shared edges: green 4pt single on the left and purple 1pt double on the right. The result must not depend on the lower row painting after the upper row.

BLUE 1PT SINGLE SPANS BOTH COLUMNS ↓	
↑ GREEN 4PT TOP (40%)	↑ PURPLE 1PT DOUBLE TOP (60%)

Expected segmented edge: the spanning cell's bottom is green single for the left 40% and purple double for the right 60%. No blue portion remains on the shared boundary.

LOGICAL SECOND: NIL START	LOGICAL FIRST: GREEN END

Expected RTL: logical cells mirror physically, but their shared edge remains green double instead of the second logical cell's nil edge.
