Table Cell Spacing

The first row inherits 7.2pt spacing, the second overrides it to 3pt, the third receives a 6pt table-property exception with asymmetric cell margins and yellow shading, and the fourth explicitly collapses spacing to zero. Blue is the table default; green and peach cells directly override inherited shading. Ordinary rows use a blue center border while the exception row replaces it with a red double border. The overall table width remains fixed in every row.

TABLE 7.2PT — LEFT / wrapping text verifies the inner width	TABLE 7.2PT — RIGHT / wrapping text verifies the inner width
ROW 3PT — LEFT / wrapping text verifies the inner width	ROW 3PT — RIGHT / wrapping text verifies the inner width
EXCEPTION 6PT + RED BORDER / wrapping text verifies the inner width	EXCEPTION 6PT + RED BORDER / wrapping text verifies the inner width
ROW NIL — LEFT / wrapping text verifies the inner width	ROW NIL — RIGHT / wrapping text verifies the inner width

Inherited and directly overridden cell colors make shading precedence visible; blue and red center rules show border exceptions. The outer grid width must stay aligned across all four rows.
